SECTION ONE: MAJOR OCCUPATIONAL CATEGORIES - STATE AND PLANNING REGIONS 1

I. State of Maryland 3
II. Baltimore Region 13
III. Suburban Washington Region 23
IV. Southern Maryland Region 33
V. Frederick Region 43
VI. Western Maryland Region 53
VII. Upper Eastern Shore Region 63
VIII. Lower Eastern Shore Region 73

SECTION TWO: MAJOR OCCUPATIONAL CATEGORIES - JURISDICTIONS 83

I. Baltimore Region Jurisdictions 85
  A. Anne Arundel County 86
  B. Baltimore County 90
  C. Carroll County 94
  D. Harford County 98
  E. Howard County 102
  F. Baltimore City 106
II. Suburban Washington Region Jurisdictions 111
  A. Montgomery County 112
  B. Prince George's County 116
III. Southern Maryland Region Jurisdictions 121
  A. Calvert County 122
  B. Charles County 126
  C. St. Mary's County 130
IV. Frederick Region Jurisdictions 135
  A. Frederick County 136
V. Western Maryland Region Jurisdictions 141
  A. Allegany County 142
  B. Garrett County 146
  C. Washington County 150

  M. Handlers, Equipment Cleaners, Helpers, and Laborers 411

APPENDIX - 1980 Major Occupational Groups in Terms of 1970 Population Census Occupation Categories 413

FOREWORD

This report is designed to provide data useful in the analysis of the occupational composition of Maryland's labor force. The data in this report have been developed from the 1980 Census Equal Employment Opportunity (EEO) Special File which is based upon labor force data from the 1980 decennial census not available in other Census Bureau tape files or publications.

The report provides statistics for both summary level and detailed occupational categories, cross-tabulated by sex, five race groups and persons of Hispanic origin. Data for major group level occupational categories (13) are presented for the State, its seven planning regions, and all counties in Maryland. Tables showing detailed occupational categories (503) are also provided for the State and five regional county groups.

The 1980 Census EEO Special File was prepared primarily in response to the need for affirmative action program planning by employers. This report provides data necessary to permit employers to assess their employment patterns in comparison with those in a particular labor market. Tables in the report include percentage calculations which show race as a percent of total labor force by summary occupational categories as well as the percent of males and females in each occupational category and occupation as a percent of total labor force. Occupational statistics are also useful for other aspects of labor force and market analysis requiring occupational detail. Census statistics are residence based and therefore are acceptable as an estimate of an area's "skilled" labor force.

SUMMARY OF FINDINGS

Statistics presented in this summary describe the occupational composition of the civilian labor force in the State and the seven planning regions in which they reside as of the 1980 Census. The State and regional occupation statistics represent an area's stock of a particular skill level at one point in time. This resource base changes over time due to such factors as migration into or out of an area, changes in employment patterns and levels, and entry or exit of persons in the labor force. In most instances, a planning region will approximate a labor market area in which component county residents typically seek work or commute to jobs either within the region or in areas within commuting distance of the region.

Labor Force Characteristics

A discussion of changes in Maryland's labor force characteristics from 1970 to 1980 is helpful before looking at the occupational composition of Maryland's work force in 1980. Based on statistics from the decennial censuses, Maryland's civilian labor force increased by approximately 476,000 persons from 1970 to 1980 to a level of 2,065,512 (see Table 1). During this time, the number of females in the civilian labor force increased by approximately 299,000 or 48.4% as contrasted to an increase of males of approximately 177,000 or 18.2%.

As shown in Table 1, male civilian labor force participation (percentage of males 16 years and over in the labor force) in 1980 was 75.2% showing almost no change from the 1970 participation rate of 75.6%. In contrast, female labor force participation increased from 44.2% in 1970 to 54.3% in 1980. The changes in labor force participation in Maryland are consistent with those which occurred in the nation during the decade of the seventies. The significant increase in female labor force participation is the result of such factors as more women with children remaining in or entering the labor force, an expansion of job opportunities for women, and better control of fertility resulting in women foregoing childbirth or delaying the start of their families until their careers are established.

Labor force participation for black females has been historically higher than for white females and unlike males, the percent of both black and white females in the labor force has increased significantly from 1970 to 1980 (from 42.4% to 52.3% for white females and from 52.9% to 61.3% for black females). The participation rate for black males (68.9% in 1980) has been historically smaller than that for white males and declined slightly from 1970 to 1980. The white male participation rate has remained constant at just below 77% from 1970 to 1980. The increased immigration during the decade of Asian and Pacific Islanders contributed to the increase in the male labor force participation rate for other races in Maryland from 68.7% in 1970 to 76.0% in 1980, nearly matching the 1980 participation rate for white males.

As shown in Table 2, the highest participation rates for males are found in the Suburban Washington (79.2%) and Frederick (79.3%) regions. The highest participation rate for females is found in the Suburban Washington Region (61.7%). The relatively high participation rates for both males and females in the Suburban Washington Region are due to the employment opportunities available in both the public and private sectors either in the region or within commuting distance. This also helps to explain why black labor force participation of 77.2% in the Suburban Washington Region is the highest in the State (Table 3).

Place of Work Characteristics

As stated previously, the occupational statistics presented in this report are for persons in the civilian labor force based on jurisdiction of residence. The occupational mix thus reflects the types of skills typically needed either in the area of residence or in jurisdictions within commuting distance.

To illustrate the relationship between place of residence and place of work, Table 4 is presented. For each of the planning regions of residence, the number of workers 16 years old and over in 1980 are shown by their place of work. In three of the seven planning regions, over 80% of the workers actually work within their region of residence - Baltimore Region (82.7%), Western Maryland Region (81.7%), and Lower Eastern Shore Region (82.8%). In each of the remaining regions, over 50% of the workers are employed within their region of residence. When the job market for the Suburban Washington Region is expanded to include Washington, D.C., over 80% of the residents are employed in the expanded area. In the Southern Maryland Region, over 80% are employed in the Southern Maryland (56.6%), Suburban Washington (16.8%), and Washington, D.C. (12.7%) areas combined. In the Frederick Region, combining those employed within the region (59.9%) with just those employed in the Suburban Washington Region (21.2%), results in achieving the 80% level. Finally, in the Upper Eastern Shore Region where 64.8% are employed within the region, the 80% level can be achieved by adding the Baltimore Region where 9.2% are employed and the State of Delaware where 12.2% are employed.

TABLE 1. CIVILIAN LABOR FORCE STATUS BY RACE AND SEX, 1980 AND 1970.* STATE OF MARYLAND

	Both Sexes				Males				Females			
			Change 1970-80				Change 1970-80				Change 1970-80

Regional Distribution of Occupations by Major Category

Chart 1 and Tables 5, 6, and 7 summarize the regional distribution of major occupational categories for all persons in the civilian labor force, females in the civilian labor force, and blacks in the civilian labor force.

Chart 1 and Table 5 show the percentage of the major occupational categories in each region. By comparing these percentages to each region's overall share of the State's total civilian labor force (bottom of Table 5) regional patterns in occupational participation within the State can be examined. For example, while 1,041,954 persons or 50.4% of the State's civilian labor force reside in the Baltimore Region, 62.2% of all persons in the Machine Operator, Assembler, and Inspector occupations reside in the Baltimore Region. This is indicative of the comparatively high share of manufacturing employment in this region of the State. Alternatively, the Suburban Washington Region has only 13.2% of the State's civilian labor force classified as Machine Operators, Assemblers, and Inspectors while 32.0% of the State's total civilian labor force resides in the region. The low percentage of persons in these occupations in the Suburban Washington Region compared to the Baltimore Region can be explained by differences in employment sector mixes between the regions.* This difference in employment mix can be seen even more dramatically in the Managerial and Professional Specialty category where the Suburban Washington Region has over a 41% share. Alternatively, the Baltimore region's share of the State's civilian labor force in the Managerial and Professional Specialty occupations (about 46%) is below its overall share of the State's civilian labor force (50.4%).

Table 6 shows the pattern of female civilian labor force participation in occupational categories across the regions of the State. For example, a high share of females in the State in the Managerial and Professional category is found in the Suburban Washington Region. The Suburban Washington region's high share of Managerial and Professional Specialty occupations as well as Technical, Sales, and Administrative Support occupations are associated with the region's large government and related support industries which employ a high proportion of persons with managerial and technical skills. Alternatively, the Baltimore Region has, for example, a disproportionate share of females in the Machine Operator, Assembler, and Inspector occupations. Again, the occupational patterns in each region are indicative of its employment base. In the Eastern Shore regions, the disproportionate share of persons (both total and female) in the Farming, Forestry, and Fishing occupations, the Machine Operator, Assembler, and Inspector occupations, and the Handler, Equipment Cleaner, Helper, and Laborer occupations are associated with the region's agricultural and food processing industries.

---

*See Department of State Planning Publication, Employment in Maryland, Trends and Projections, 1967-2000, (July, 1982).

The distribution of blacks* by major occupational categories is displayed in Table 7. Of the 31,639 blacks Statewide in the Executive, Administrative, and Managerial category, 17,482 or 55.3% reside in the Suburban Washington Region (as of the 1980 Census). Overall, blacks in the Suburban Washington Region represented only 36.1% of all blacks in the State in the civilian labor force. The Baltimore Region has 70.8% or 23,596 of all blacks in the State in Operator, Assembler, and Inspector occupations compared to only 54.1% of all blacks in the State in the civilian labor force.

---

* Excludes blacks of hispanic origin.

Percent Share Within a Major Occupational Category

Chart 2 and Tables 8, 9, 10, and 11 provide an overview of the occupational composition of the civilian labor force residing in the State and its regions. Chart 2 and Table 8 display for the State the major occupational categories as a percent of the total for all occupational categories by sex and race. Tables 9, 10, and 11 provide this information for total, females, and blacks in the civilian labor force for each of the seven planning regions.

As shown in Chart 2 and Table 8, the distribution of the major occupational categories appears more diversified for males than females. Of the 13 major occupation categories, the largest category for males is Precision Production, Craft and Repair with 216,030 participants or 18.8% of all males. This is followed by Executive, Administrative, Managerial (160,351 or 13.9%), and Professional Specialty (155,522 or 13.5%). The proportion of males engaged in such occupational categories as Private Household Services (0.1%), Farming, Forestry, and Fishing (2.3%) and Protective Services (3.1%) are relatively small. The category containing the greatest number of females is Administrative Support, Including Clerical (311,998 or 34.1%). This is followed by Professional Specialty with 144,323 females (15.4%) and Service Occupations, Except Protective and Household with 131,427 females (14.4%). Categories having the fewest women are Protective Services (5,342 or 0.6%), Farming, Forestry, and Fishing (5,661 or 0.6%), and Transportation and Material Handling (7,658 or 0.8%).

The occupational distribution of the civilian labor force by race* shows that most whites are involved in the Administrative Support, Including Clerical occupations (as of the 1980 Census). There are 301,582 whites or 19.3% in this category. The Professional Specialty occupations are second with 240,196 or 15.4%. The third largest occupation grouping for whites is 265,540 or 14.1% (Technical and Related Support and Sales occupations combined) followed closely by the Executive, Administrative, and Managerial occupations with 203,075 persons or 13.0%.

Like whites, most blacks are in Administrative Support, Including Clerical occupations, 97,020 or 22.2%. Unlike whites, the second largest category for blacks is the Service, Except Protective and Household occupational category with 72,112 persons (16.5%). The Professional Specialty occupations with 43,124 persons or 9.9% are next. For blacks, the remaining major occupational categories are fairly evenly distributed ranging from 8.1% (Technicians and Related Support and Sales combined) to 5.9% (Transportation and Material Moving). Laborer occupations at 7.5% represent a higher occupational percentage for blacks than do Executive, Administrative, and Managerial occupations at 7.2%.

Unlike whites or blacks, persons of other races (e.g., Asian and Pacific Islanders) are found in the largest numbers in the Professional Specialty category, 8,797 or 23.3% of all persons of other races. The Administrative Support, Including Clerical occupations are the second largest category with 5,425 persons or 14.4%, followed by Service occupations, Except Protective and Household with 5,174 persons or 13.7%.

---

*The racial categories shown exclude hispanics which instead are reported separately.

Hispanic occupational representation in many ways resembles a combination of white and black patterns. Ranked first are the Administrative Support, Including Clerical occupations with 5,238 or 18% of all Hispanics. Professional Specialty occupations rank second with 4,728 or 16.2%, followed by Service occupations, Except Protective and Household with 4,307 persons or 14.8%.

Table 9 shows the total number of persons in the civilian labor force and the number and percent in each of the major occupational categories for the State and the planning regions. The occupational patterns within each of the regions is generally reflective of the employment opportunities in the region or in adjacent regions within commuting distance. In comparison to the State, the Suburban Washington Region is more highly represented by those occupations in the Managerial and Professional Specialty categories followed by the Technical, Sales, and Administrative Support categories. The Western Maryland and Eastern Shore regions as well as the Baltimore and Frederick regions have higher percentage representation than the State in the Operator, Fabricator, and Laborer occupational categories and the Precision Production, Craft, and Repair occupations. As expected, the percentage representation in the Farming, Forestry, and Fishing occupations is higher than the State percentage in the Eastern Shore regions and in the Frederick, Southern Maryland, and the Western Maryland regions. The Southern Maryland region's occupational representation is higher than the State's in the Service occupations.

Table 10 is like Table 9 except that it shows only the total number of females in the civilian labor force and the number and percent of females in each of the major occupational categories for the State and the planning regions. Statewide, 63.9% of the 915,707 females in the civilian labor force are engaged in three occupations. The Administrative Support, Including Clerical category attracted the most females (311,998 or 34.1%), followed by Professional Specialty (141,323 or 15.4%), and Service, Excluding Protective and Household (131,427 or 14.4%). The major occupation categories with the fewest female participants are Protective Service; Farming, Forestry, and Mining; and Transportation and Material Moving. These three occupational groupings combined make up only about 2% of the female civilian labor force. As might be expected, female percentage representation in the Executive, Administrative, and Managerial occupational category is highest in the Suburban Washington Region (12.0%) followed quite a bit behind by the Southern Maryland Region (8.9%) and the Frederick Region (7.9%). All three of these regions are influenced by the Washington, D.C. job market where employment opportunities for women in government and related sectors are particularly attractive. The percentage of females within a region engaged in such categories as Machine Operator, Assembler, and Inspector occupations and Precision Production, Craft, and Repair occupations exceed the State percentage in the Eastern Shore and Western Maryland regions. To a lesser extent, this is also true in the Frederick Region. As might be expected, the Baltimore Region female occupation mix most closely follows the overall State pattern.

Table 11 is similar to tables 9 and 10 except that it shows only the number of blacks* in the civilian labor force and the number and percent of blacks in each of the major occupational categories for the State and the planning regions. Statewide, there are 436,741 blacks in the civilian labor force (as of the 1980 Census). Slightly more than one-half (221,092 persons or 50.6%) are in the Service occupations and the Operator, Fabricator, and Laborer occupations. There were 207,266 blacks or 47.5% engaged in the Managerial and Professional Specialty occupations and the Technical, Sales, and Administrative Support occupations. Statewide, black representation in the Executive, Administrative, and Managerial occupations is 7.2% and in the Professional Specialty occupations 9.9%. In the Suburban Washington Region, however, black representation in these two occupational categories is considerably higher (11.1% and 12.1% respectively). This contrasts with the Baltimore Region where the respective percentages are only 5.4% and 9.1%. This suggests that employment opportunities for blacks in the areas of managerial and professional responsibility are greater in the Washington, D.C. job market with its large government and related sectors. In the Eastern Shore regions, black percentage representation in the Operator, Fabricator, and Laborer occupational category is much higher than the overall State representation of blacks in these occupations. The Baltimore Region black occupational mix most closely follows the overall State pattern.

---

*Excludes any blacks of hispanic origin.

Female Participation in Major Occupational Categories

Chart 3 and tables 12, 13, and 14 provide an overview of the participation of females in the major occupational categories for the State and its regions. Chart 3 and Table 12 display for the State female participation by major occupational category as a function of race.* Tables 13 and 14 provide information by region on total and black female participation respectively in each of the major occupational categories.

As shown in Chart 3 and Table 12, female participation in the State's civilian labor force is 44.3% and ranges from a low of 42.4% for white females to 51.1% for black females. Statewide, female participation is disproportionately higher than the overall female participation in the labor force in such categories as the Private Household occupations (95.6% of all persons in these occupations are females), the Administrative Support, Including Clerical occupations (76.2%), and the Service, Except Protective and Household occupations (63.3%). Female participation is disproportionately lower than the overall female participation in the labor force in such categories as the Precision Production, Craft, and Repair occupations (7.4%), the Transportation and Material Moving occupations (8.9%), and the Protective Service occupations (12.9%). In the Professional Specialty occupations, females represent 47.6% of all persons in this category. Included in this occupational category are the registered nurse and teacher occupations where female participation is particularly high. Females represent only 33.7% of persons in the Executive, Administrative, and Managerial occupations compared to their 44.3% representation in the entire civilian labor force.

Female participation in the various occupational categories by racial grouping* generally follow the overall patterns for female occupational participation (see Table 12. Among the exceptions are the relatively higher black female percentages in the Managerial and Professional Specialty occupations and to a lesser extent the Technical and Related Support occupations and the Sales occupations. Females in the other races category have higher than the overall rates of female participation in the Machine Operator, Assembler, and Inspector occupations, the Handler, Equipment Cleaner, Helper, and Laborer occupations, and the Precision Production, Craft, and Repair occupations. Generally, hispanic female participation is slightly lower than that for all females in the Managerial and Professional Specialty occupations and the Technical, Sales, and Administrative Support occupations (the one exception being the Sales occupations). Hispanic female participation is generally higher than the overall female participation rate in the Service occupations and the Operator, Fabricator, and Laborer occupations (the exceptions are the Service occupations, Except Protective and Household services, and the Transportation and Material Moving occupations).

Table 13 shows for each of the planning regions the number of females in each of the major occupational categories and females as a percent of all persons in each of the occupational categories. Females as a percent of all persons in the civilian labor force range from a low of 40.0% in the Western Maryland Region to a high of 46.3% in the Suburban Washington Region. The level of female participation in specific occupational categories depends, in part, on the particular mix of industrial sectors within each region (or in areas within commuting distance). For example, while females Statewide represent only 18.4% of persons in the Handler, Equipment Cleaner, Helper, and Laborer occupations, females represent 34.6% of persons in these occupations in the Lower Eastern Shore Region and 26.7% in the Upper Eastern Shore Region. Women represent over 50% of the persons in Professional Specialty occupations in the Eastern Shore and the Western Maryland regions compared to a Statewide rate of 47.6%. The teaching occupations make up a high proportion of the Professional Specialty occupations in these regions. The highest percentage of females in the Executive, Administrative, and Managerial occupations is in the Suburban Washington Region (37.0%) followed closely by the Southern Maryland Region (36.4%). This compares to a female percentage of 33.7% Statewide and can, in part, be explained by the employment opportunities afforded women in government and related sectors in the Washington, D.C. job market.

---

*The racial categories shown exclude hispanics which instead are reported separately.

Table 14 shows for each of the planning regions the number of blacks* in each of the major occupational categories and black females as a percent of all blacks in each of the occupational categories. Black females as a percent of all blacks in the civilian labor force range from a low of 46.3% in the Southern Maryland Region to a high of 52.7% in the Suburban Washington Region. Black female participation in the Managerial and Professional Specialty occupations is significant. While females represent only 33.7% of persons in the Executive, Administrative, and Managerial occupations and 47.6% of persons in the Professional Specialty occupations Statewide (see Table 13), black females represent 49.1% and 65.1% of all blacks in these two categories respectively (see Table 14). This same pattern holds true when comparing total female and black female participation in these occupations across the planning regions (comparing tables 13 and 14). The black female percentage in the Professional Specialty occupations is highest in the Upper Eastern Shore Region (80.0%), followed by the Lower Eastern Shore Region (71.8%), and the Southern Maryland Region (70.1%). In the Executive, Administrative, and Managerial occupations, the highest black female percentage is in the Suburban Washington Region (51.7%) followed by the Lower Eastern Shore Region (51.5%). In the Eastern Shore regions, black female participation in the Operator, Fabricator, and Laborer occupations and the Precision Production, Craft, and Repair occupations generally exceeds the overall female participation in these occupations (comparing tables 13 and 14).

---

*Excludes any blacks of hispanic origin.

*Includes unemployed with no civilian work experience since 1975.

( ) = Percent of total in each occupational category in each region.

TABLE 14. BLACKS** IN CIVILIAN LABOR FORCE BY MAJOR OCCUPATIONAL CATEGORY BY REGION OF RESIDENCE, 1980

(Black Females as a Percent of Total Blacks in Each Occupational Category in Each Region)

MAJOR OCCUPATIONAL CATEGORY:	Baltimore Region	Suburban Washington Region	Southern Maryland Region	Frederick Region	Western Maryland Region	Upper Eastern Shore Region	Lower Eastern Shore Region	State of Maryland
MANAGERIAL AND PROFESSIONAL SPECIALTY:								
Executive, Administrative, Managerial	12,661 (46.1)	17,482 (51.7)	588 (41.0)	139 (30.2)	75 (48.0)	187 (32.6)	507 (51.5)	31,639 (49.1)
Professional Specialty	21,415 (68.5)	19,140 (60.6)	835 (70.1)	189 (60.3)	71 (45.1)	469 (80.0)	1,005 (71.8)	43,124 (65.1)
TECHNICAL, SALES, AND ADMINISTRATIVE SUPPORT:								
Technicians and Related Support	5,544 (60.6)	7,562 (54.4)	187 (39.6)	91 (62.6)	41 (17.1)	79 (74.7)	161 (61.5)	13,665 (56.9)
Sales	11,547 (63.2)	9,021 (55.3)	398 (70.9)	106 (73.6)	98 (62.2)	181 (71.3)	467 (70.0)	21,818 (60.3)
Administrative Support Including Clerical	45,574 (74.4)	46,707 (76.1)	2,091 (75.6)	477 (76.3)	251 (82.1)	630 (66.0)	1,290 (72.4)	97,020 (75.2)
SERVICE:								
Private Household	4,765 (96.3)	1,539 (93.2)	347 (97.1)	161 (100.0)	96 (100.0)	592 (93.1)	437 (98.4)	7,937 (95.7)
Protective Service	5,294 (23.0)	4,972 (13.8)	283 (23.7)	53 (26.4)	0 (0.0)	57 (19.3)	155 (14.8)	10,314 (18.7)
Service, Except Protective and Household	45,917 (62.4)	17,661 (57.2)	2,768 (66.7)	595 (68.2)	310 (59.0)	1,600 (57.6)	3,261 (61.9)	72,112 (61.2)
Farming, Forestry, and Fishing	1,574 (5.5)	1,042 (12.6)	631 (10.9)	49 (4.1)	7 (0.0)	529 (9.1)	859 (25.1)	4,691 (11.8)
Precision Production, Craft, and Repair	17,894 (11.7)	11,273 (10.3)	1,395 (9.4)	287 (9.8)	183 (3.8)	945 (28.1)	1,679 (23.4)	33,656 (12.1)
OPERATORS, FABRICATORS, AND LABORERS:								
Machine Operators, Assemblers, Inspectors	23,596 (40.4)	4,874 (36.0)	449 (31.6)	230 (43.9)	225 (34.7)	1,446 (55.5)	2,523 (66.3)	33,343 (42.2)
Transportation and Material Moving	14,379 (6.8)	8,687 (9.3)	728 (11.7)	139 (12.2)	123 (10.6)	592 (5.6)	1,141 (7.6)	25,789 (7.8)
Handlers, Equipment Cleaners, Helpers, Laborers	20,004 (16.6)	6,278 (15.4)	1,515 (8.8)	284 (8.5)	149 (30.2)	1,653 (36.7)	2,867 (41.9)	32,750 (19.2)
TOTAL, ALL*	236,493 (50.4)	157,610 (52.7)	12,592 (46.3)	2,832 (50.6)	1,689 (46.4)	9,068 (47.8)	16,457 (51.3)	436,741 (51.1)

---

*Includes unemployed with no civilian work experience since 1975.

( ) = Percent of blacks that are female in each occupational category in each region.

**Excludes blacks of hispanic origin.

Percent Share by Race Within a Major Occupational Category

Chart 4 and tables 15 and 16 provide an overview of the occupational composition of Maryland's civilian labor force by race* as of the 1980 Census.

Chart 4 and Table 15 summarize for the State the racial composition by major occupational category. Statewide, 75.6% of the civilian labor force is white, 21.1% is black, 1.8% is of other races, and 1.4% is hispanic. Whites are least represented Statewide in the Private Household occupations (only 31.8% compared to an overall 75.6% of the civilian labor force) and have the highest representation in the Sales occupations (85.3%) followed closely by the Executive, Administrative, and Managerial occupations (84.0%).

Just the opposite is true of blacks. Blacks are most heavily represented in the Private Household occupations (57.0% compared to an overall 21.1% share of the civilian labor force) and have the least representation in the Sales occupations (11.8%) followed by the Executive, Administrative, and Managerial occupations (13.1%). Blacks are also heavily represented in the Service, Except Protective and Household occupations (34.7%), and all of the Operator, Fabricator, and Laborer occupations. In all of these occupations, whites have lower representation than their overall 75.6% share of the civilian labor force.

Other races are most heavily represented in the Technician and Related Support occupations (3.8% compared to an overall 1.8% of the civilian labor force) followed by the Professional Specialty occupations (3.0%). Other races are least represented in the Protective Service occupations (0.5%), Farming, Forestry, and Fishing occupations (0.7%), and Transportation and Material Moving occupations (0.7%).

Hispanics are most heavily represented in the Private Household occupations (9.0% compared to an overall 1.4% of the civilian labor force). Hispanics are least represented in the Transportation and Material Moving occupations (0.7%) and the Farming. Forestry, and Fishing occupations (0.9%).

Table 16 shows for each of the planning regions the number of blacks in each of the major occupational categories and blacks as a percent of all persons in that occupational category within that region. Overall, blacks range from a low of 1.8% of the civilian labor force in the Western Maryland Region to a high of 23.8% of the civilian labor force in the Suburban Washington Region. Without exception, blacks in each region represent a higher share of persons in the Private Household occupations, Service occupations, Except Protective and Household, and all of the Operator, Fabricator, and Laborer occupations than would be expected based on their percentage of the total civilian labor force in each region. Just the opposite is true in the Managerial and Professional Specialty, the Sales, and the Precision Production, Craft, and Repair occupations where black participation within each region is less than their overall regional participation rate in the labor force. In the Managerial and Professional Specialty occupations, blacks most closely approach their overall regional participation rate in the labor force in the Suburban Washington Region. Blacks appear most disproportionately represented in the Private Household occupations in all regions of the State (particularly the Western Maryland, Frederick, and Upper Eastern Shore regions when viewed relative to the region's overall black percentage share of the labor force).

---

*The racial categories shown exclude hispanics which instead are reported separately.

**Excludes blacks of hispanic origin.

REPORT ORGANIZATION

Sections

The body of this report consists of three sections containing data for both major and detailed occupational categories. Occupational data are provided for the State, the Department of State Planning's planning regions, and the political subdivisions within each planning region.

The State's seven planning regions and their component political subdivisions are:

I. Baltimore Region - Baltimore Region, Anne Arundel, Baltimore County, Carroll, Harford, Howard, Baltimore City

II. Suburban Washington Region - Suburban Washington Region, Montgomery, Prince George's

III. Southern Maryland Region - Southern Maryland Region, Calvert, Charles, St. Mary's

IV. Frederick Region - Frederick County

V. Western Maryland Region - Western Maryland Region, Allegany, Garrett, Washington

VI. Upper Eastern Shore Region - Upper Eastern Shore Region, Caroline, Cecil, Kent, Queen Anne's, Talbot

VII. Lower Eastern Shore Region - Lower Eastern Shore Region, Dorchester, Somerset, Wicomico, Worcester

Section one consists of tables and graphs which present findings for the State and each of the seven planning regions. For the 13 major occupational categories and unemployed persons with no civilian work experience since 1975, four types of tables cross-tabulated by sex, race, and Hispanic origin are displayed:

1. Absolute Number in the Occupational Category
2. Each Occupation Category as a Percent of the Total Civilian Labor Force
3. Males and Females as a Percent of each Occupational Category
4. Race as a Percent of Total in each Occupational Category

In addition, four graphs which highlight a portion of each of the four tables are provided as follows:

1. Number of Persons by Major Occupational Category for Total, Male, Female, Non-Hispanic White, and Non-Hispanic Black

2. Percent of Total Persons in each Major Occupational Category for Total, Male, Female, Non-Hispanic White, and Non-Hispanic Black

3. Percent of Females in each Major Occupational Category for Total, Non-Hispanic White, Non-Hispanic Black, Non-Hispanic Other Races, and Hispanic

4. Percent within a Major Occupational Category that are Non-Hispanic White, Non-Hispanic Black, Non-Hispanic Other Races, and Hispanic

Section two provides tables showing the same 13 major occupational categories as in section one. These tables are displayed for each jurisdiction and are organized by planning region. Graphs are not provided for the jurisdictions. The four types of tables displayed are:

1. Absolute Number in the Occupational Category

2. Each Occupation Category as a Percent of the Total Civilian Labor Force

3. Males and Females as a Percent of each Occupational Category

4. Race as a Percent of Total in each Occupational Category

Section three contains tables which show detailed occupational categories (503) cross-tabulated by sex, race and Hispanic origin. The 503 detailed occupational categories are displayed under each of the 13 major occupational category headings. The tables show absolute numbers only and are provided for the State and five regional county groups as listed below:

I. Baltimore Region - Anne Arundel, Baltimore County, Carroll, Harford, Howard, Baltimore City

II. Suburban Washington, Southern Maryland, and Frederick Regions - Montgomery, Prince George's, Calvert, Charles, St. Mary's, Frederick

III. Western Maryland Region - Allegany, Garrett, Washington

IV. Upper Eastern Shore Region - Caroline, Cecil, Kent, Queen Anne's, Talbot

V. Lower Eastern Shore Region - Dorchester, Somerset, Wicomico, Worcester

Appendix

The appendix provides a table showing the 1980 census major occupational group categories and codes and their 1970 equivalents.

SOURCE DATA CHARACTERISTICS

The Census Bureau has released a special summary tape file which is designated the 1980 Census Equal Employment Opportunity (EEO) Special File and is based on labor force data from the 1980 decennial census. The file contains two sample-based tabulations - detailed census occupational categories by sex, race, and Spanish/Hispanic origin and years of school completed for selected age groupings, by sex, race, and Hispanic origin. Both tables are used in preparing studies dealing with socio-economic concerns, particularly affirmative action planning programs. This report has been designed to provide data on the occupational composition of Maryland's labor force and does not include data on educational attainment contained in the file.*

Equal Opportunity Special File Content

The two sample based tabulations are provided for 4 types of geographic areas and repeated for up to 12 race/ethnic origin categories in each geographic area. The geographic coverage consists of State, County, Standard Metropolitan Statistical Areas, and Places of 50,000 or more persons. The 12 race/ethnic origin categories are as follows:

Total Civilian Labor Force (CLF)
Total Hispanic
White, Not Hispanic
Black, Not Hispanic
American Indian/Eskimo/Aleut, Not Hispanic
Asian/Pacific Islander, Not Hispanic
Race not elsewhere classified
Total White
Total Black
Total American Indian/Eskimo, Aleut
Total Asian/Pacific Islander
Total Race not elsewhere classified

The race and Hispanic categories selected for display in this report are as follows:

Total Civilian Labor Force (CLF)
White, Not Hispanic
Black, Not Hispanic

---

*Tabulations of the Number of Years of School Completed by age, sex, and five race categories and Hispanic Origin are available in printout form only upon request from the Office of Planning Data.

American Indian, Eskimo/Aleut, Not Hispanic
Asian and Pacific Islander, Not Hispanic
Race not elsewhere classified, Not Hispanic
Total Hispanic

The following is a description of each of the two sample based tabulations contained in the file and tabulated for the 12 race and Hispanic categories listed above:

Tabulation 1. Detailed occupational categories (514)* including 1 residual category for unemployed with no civilian work experience since 1975 by sex.

Tabulation 2. Years of School Completed (5 categories: 0-11, 12, 13-15, 16, 17 or more) by age: 7 categories: (16-19, 20-24, 25-29, 30-34, 35-39, 40-69, 70+) and by sex.

This report displays 503 detailed occupational categories cross-tabulated by sex and the race and Hispanic categories listed above.

Definitions

In both tabulations, the universe is the civilian labor force. The occupation data in Tabulation 1 are for the "recent-experienced" civilian labor force. The civilian labor force includes persons 16 years old and over who may be employed or unemployed. Occupation data are not tabulated for persons not currently in the labor force and who have not worked since 1975. The "recent-experienced" civilian labor force is defined as persons employed or unemployed in 1980 but having civilian work experience between 1975-1980. Therefore, the residual category "unemployed with no civilian work experience since 1975 includes all persons who reported themselves as unemployed in 1980 and either (1) their last job since 1975 was in the Armed Forces; (2) they last worked in 1974 or earlier; or (3) they reported that they had never worked prior to 1980.

Occupation data from the census are obtained from respondents in households and reported by place of residence. They differ from statistics based on reports from individual business establishments which are reported by place of work. In statistics gathered from establishments, persons who work for more than one establishment may be counted more than once. These establishment based statistics also usually exclude private household workers and self-employed persons, but may include workers less than 16 years of age.

The write-in responses to questions 29a (What kind of work was this person doing?) and 29b (What were this person's most important activities or duties?) were taken together to assign the respondent (householder) to a census occupational category.

---

*The file contains 503 occupational categories plus 10 industry and class of worker subcategories for selected occupations and the residual category for unemployed with no civilian work experience since 1975.

Census occupation categories are fully defined in the Classified Index of Industries and Occupations, PHC80-R3. The 503 detailed occupation categories are based on the Standard Occupational Classification (SOC) system originally issued in 1977 by the Office of Federal Statistical Policy and Standards and revised in 1980. One of the major purposes of the SOC is to promote uniformity and comparability in the presentation of occupational data collected by various agencies.

The 1980 Census EEO Special File contains detailed occupational categories (503) only. Section three of this report provides tables for the State and five regional groupings which display each of the 503 detailed categories and the corresponding 1980 census code. In sections one and two, the 503 detailed categories are summarized into 13 major occupational categories. The number of unemployed with no civilian work experience since 1975 is also displayed. These major categories are listed below under four summary headings as follows:

Managerial and professional specialty occupations:

Executive, administrative, and managerial occupations
Professional specialty occupations

Technical, sales, and administrative support occupations:

Technicians and related support occupations
Sales occupations
Administrative support occupations, including clerical

Service occupations:

Private household occupations
Protective service occupations
Service occupations, except protective and household
Farming, forestry, and fishing occupations
Precision production, craft, and repair occupations

Operators, fabricators, and laborers:

Machine operators, assemblers, and inspectors
Transportation and material moving occupations
Handlers, equipment cleaners, helpers, and laborers

Comparability

Although a question on occupation has been asked in each census since 1850, it is usually not useful to attempt any historical analyses - for the pre-1970 period. In 1940, 1950, and 1960 labor force data were published for persons 14 years old and over. In 1970, labor force data was reported for persons 16 years old and over to comply with an official Government definition instituted in 1967.

The major difference in occupation data for 1970 and 1980 stems from the adoption of census occupation coding to the new Standard Occupational Classification (SOC) system. While many of the major categories in the 1980 classification have been designed to offer a general measure of compatibility with 1970 categories, the principles governing the classification and many of the detailed categories have been changed substantially.

The appendix provides some information for major occupation group categories on the relationship between the 1980 census occupational categories and codes and their 1970 counterparts. The table does not include all of the detailed occupational categories that have shifted from one major occupational group under the 1970 classification system to another under the 1980 system. Only occupational categories in which more than half of the detailed occupational categories shifted to a new or different major grouping are listed in the table. Also, it is important to note that at the detailed occupational level, there have been changes in job definitions and titles. Therefore, a detailed occupational title that is the same under the new Standard Occupational Classification as in the 1970 system may not mean the same thing. The Bureau expects to provide additional information necessary to identify 1970-1980 occupational category equivalencies in the near future.

Users who require a complete index to the 1980 occupation classification and industries are referred to the following references. It should be noted that these references do not assist in identifying 1970-1980 equivalencies, but define only the industrial and occupational classification systems adopted for the 1980 Census of Population and other demographic surveys conducted by the Bureau during the 1980's.

> PHC 80-R3. Alphabetical Index of Industries and Occupations.
> The index features the respondent's industry (employer's kind of business) and occupation (employee's kind of work) as in the 1980 Census of Population, Current Population Survey, and other demographic surveys conducted by the Bureau of the Census. The index lists approximately 20,000 industry and 29,000 occupation titles in alphabetical order. It is a comprehensive list of specific industries and occupations developed over time and continuously updated through review of census and survey questionnaires. It is available from the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402. S/N 003-024-02574-4. Price is $9 as of November, 1982.
>
> PHC 80-R4. Classified Index of Industries and Occupations.
> The index presents, for each category in the industrial and occupational classification systems, the individual titles that constitute each of the 231 industry and 503 occupation categories in the classification systems. The individual titles are the same as those shown in the Alphabetical Index. The 1980 occupation classification reflects the new U.S. Standard Occupation Classification (SOC). As in the past, the 1980 industry classification reflects the Standard Industrial Classification (SIC). The Classified Index is available from the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402. S/N 003-024-02575-2. Price is $7 as of November, 1982.

> U.S. Department of Commerce, Office of Federal Statistical Policy and Standards. Standard Occupational Classification Manual, 1980.
> This publication provides a coding and naming system for identifying and classifying occupations. The standards outlined in this publication

were used in developing the census occupation classification. It is available from the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402. S/N 003-005-00187-5. Price is $17 as of November, 1982.

Sample Design and Errors in the Data

The data available on the Equal Employment Opportunity (EEO) Special File are based on the 1980 Census sample. The data are estimates of the actual figures that would have resulted from a complete count. Estimates can be expected to vary from the complete-count results because they are subject to two basic types of error — sampling and nonsampling. The sampling error in the data arises from the selection of persons and housing units to be included in the sample. The nonsampling error, which affects both sample and complete-count data, is the result of all other errors that may occur during the collection and processing phases of the census.

The basic sampling unit for the 1980 Census was the housing unit, including all occupants. For persons living in group quarters, the sampling unit was the person. Two sampling rates were employed. In counties, incorporated places, and minor civil divisions estimated to have fewer than 2,500 persons (based on pre-census estimates), one-half of all housing units and persons in group quarters were to be included in the sample. In all other places, one-sixth of the housing units or persons in group quarters were sampled. The purpose of this scheme was to provide relatively more reliable estimates for small places. When both sampling rates were taken into account across the Nation, approximately 19 percent of the Nation's housing units were included in the census sample.

Since the data in this file are based on a sample, they may differ somewhat from complete-count figures that would have been obtained if all housing units, persons within those housing units, and persons living in group quarters had been enumerated using the same questionnaires, instructions, enumerators, etc. The deviation of a sample estimate from the average of all possible samples is called the sampling error. The standard error of a survey estimate is a measure of the variation among the estimates from the possible samples and thus is a measure of the precision with which an estimate from a particular sample approximates the average result of all possible samples. The sample estimate and its estimated standard error permit the construction of interval estimates with prescribed confidence that the interval includes the average result of all possible samples. The method of calculating standard errors and confidence intervals for the data on the EEO file is provided in Census of Population, 1980: Equal Opportunity Special File Technical Documentation prepared by the Data User Services Division, Bureau of the Census. Washington: The Bureau, 1982, pp. 14-25.

In addition to the variability which arises from the sampling procedures, both sample data and complete-count data are subject to nonsampling error. Nonsampling error may be introduced during each of the many extensive and complex operations used to collect and process census data. For example, operations such as editing, reviewing, or handling questionnaires may introduce error into the data.

Suppression

In order to maintain the confidentiality promised respondents and required by law, the Census Bureau withholds or "suppresses" tabulations of characteristics of very small groups of people. In some of the smaller counties in Maryland, for example, the sum of all of the race groups may not equal the total because of suppression. This is evident in the tables for Calvert, Caroline, Queen Anne's, Talbot, Dorchester, and Somerset counties.

In the EEO file, the record for the category "total civilian labor force" for a geographic area is never suppressd but records for individual race/Hispanic groups on the EEO file are subject to suppression. The suppression rule states the data for a specific race/Hispanic category will appear only when there are 30 or more persons in that category living in the geographic area.

In some cases, complementary suppression is applied to prevent the derivation of suppressed data by subtraction. For instance, if data were available for all race/Hispanic categories except one, the suppressed data could easily be derived from the total. When complementary suppression is applied on the EEO file, data are suppressed from the smallest race/Hispanic category having 30 or more persons or from one of the "other" categories.
